

**HIV/AIDS SITUATION IN MACAO**  
**Quarterly HIV/AIDS Statistics**  
**(July – Sept., 2013)**

In the third quarter of 2013, there were reported 8 cases of HIV infections, being all of them were males. Of the newly cases reported in this quarter, 5 were local residents and 3 were non-residents. In local residents, 3 cases of HIV infections acquired the virus through heterosexual contact, 1 through homosexual contact, and in 1 case the way of transmission was indeterminate due to insufficient information. In non-residents, 1 acquired the virus through heterosexual contact, 1 through bisexual contact, 1 was an intravenous drug user. During this quarter, 2 cases of AIDS were also declared, 1 local resident and 1 non-resident included.

Since Jan. 2013 up to the end of Sept. 2013, a cumulative total of 23 HIV infections were reported. 48% accounted for the infection through heterosexual contact, 13% through homosexual contact, 4% through bisexual contact, and the injecting drug use represented 9% of the infections.
