

HIV/AIDS SITUATION IN MACAO
Quarterly HIV/AIDS Statistics
(Oct. – Dec., 2014)

In the fourth quarter of 2014, there were reported 13 cases of HIV infections, 6 of which were males and 7 were females.

Of the newly cases reported in this quarter, 5 were local residents and 8 were non-residents. In local residents, 4 cases of HIV infections acquired the virus through heterosexual contact, 1 case through homosexual contact. In non-residents, 6 acquired the virus through heterosexual contact, 1 case through homosexual contact, 1 case through bisexual contact. During this quarter, 2 cases of AIDS were also declared.

In the year of 2014, a total of 48 HIV infections were reported in Macao, representing an increase of 71% in comparison with the year of 2013, and the rate of infection in local residents was 58%. Sexual contact is the principal route of transmission, 52% accounted for the infection through heterosexual contact, 27% through homosexual contact, 6% through bisexual contact, and the injecting drug use represented 4% of the cumulative total.
